

Q-LINK NETWORK COMMUNICATIONS

TERMS OF SERVICE & PRIVACY PROTOCOL CHARTER

Effective Epoch: September 2026 | Document Version: 3.0.4 | Governing Standard: Zero-Knowledge Architecture

Please read this Terms of Service & Privacy Protocol Agreement carefully before accessing or authenticating into the Q-Link platform. By logging in, creating an account, or interacting with Q-Link nodes, you agree to be bound by the terms, operating covenants, and data policies described herein. If you do not accept these terms, you must discontinue platform use immediately.

1. Acceptance of Terms & Protocol Identity

Q-Link is a next-generation peer network and high-performance communication platform engineered around client-side zero-knowledge cryptography. Authentication options (Google OAuth, Microsoft Azure AD, GitHub, or Phone OTP) are provided strictly to issue an authenticated session and associate your sovereign Quantum Handle. Your login constitutes affirmative consent to these operating rules and protocol principles.

2. Cryptographic Architecture & Data Privacy

Unlike legacy social platforms that inspect and harvest user conversations, Q-Link enforces strict mathematical immunity through client-side cryptography:

- **Client-Side Key Generation:** All cryptographic key pairs (ECDH P-256 and AES-256-GCM) are minted strictly inside the user's browser runtime (W3C WebCrypto API). Private keys never touch Q-Link infrastructure.
- **Zero Plaintext Storage:** Communication payloads are encrypted on the sender's local device before transmission. Q-Link relays operate as blind conduits; our servers and databases cannot decipher your private conversations.
- **Telemetry Immunity:** We strictly prohibit background keystroke telemetry, unposted draft profiling, ultrasonic acoustic beacons, or relational address book harvesting. Unposted message state exists solely within local browser memory.

3. Data Minimization: What Is Stored vs. What Is Impossible to Store

In full transparency and adherence to international privacy standards (GDPR Art. 5(1)(c) and CCPA / CPRA), our records are limited to the minimal viable metadata needed for real-time delivery:

- **Retained Records:** User handle (@username), public display name, public encryption key, ephemeral ciphertext transit buffer, and gamification aura metrics.
- **Impossible to Retain:** Plaintext message bodies, voice audio data, private keys, location telemetry, cross-site tracking cookies, and advertising identity tokens.

4. Permitted Use & Community Conduct

Users must respect network stability and the rights of other participants. Prohibited conduct results in immediate, non-negotiable cryptographic node revocation:

- **Safety Mandate:** Zero tolerance for Child Sexual Abuse Material (CSAM), non-consensual imagery, terror mobilization, or credible threats of physical violence.
- **Network Integrity:** Prohibition of distributed denial-of-service (DDoS) command relays, automated scraping botnets, credential harvesting, or exploitation of protocol APIs.
- **Rate Limiting:** Upstash Redis token-bucket governors enforce protective traffic thresholds at the edge. High-frequency automated spam triggers automatic temporary throttling.

5. The 'Nuclear Purge' Right to Absolute Deletion

Q-Link fully implements the Right to Erasure (GDPR Article 17). When you select 'Nuclear Purge' or delete your profile from the ID Console, our database executes an atomic hard-delete cascade across all user records, push tokens, and transit buffers. No residual shadow profile or archived backup copy is retained.

6. Third-Party Embeds & External Services

When you share social links (YouTube, X, Instagram, Facebook), Q-Link utilizes native players or secure embed previews. Third-party content providers operate under their respective privacy policies. Q-Link does not transmit your profile credentials or private keys to external content networks.

7. Warrant Canary & Subpoena Mathematics

As of September 2026, Q-Link has received ZERO (0) National Security Letters, FISA court orders, or governmental interception directives. Because Q-Link does not possess user decryption keys, any subpoena compelling decryption receives the only technically truthful response: decryption is mathematically impossible.

8. Limitation of Liability & Disclaimers

The Q-Link protocol is provided on an 'AS IS' and 'AS AVAILABLE' basis without warranties of any kind. You are solely responsible for safeguarding your device security and cryptographic credentials. Q-Link is not liable for data loss caused by unauthorized physical device access, browser cache wipes without backup, or network-level disruptions.

9. Amendments & Corporate Governance

Any material updates to this charter will be cryptographically tagged and announced across the official platform status channel. Continued usage following published revisions constitutes acceptance of the modified protocol terms.

10. Legal Coordinates & Inquiries

For legal notices, vulnerability disclosures, or regulatory inquiries, contact our compliance team:
